MOHAMMED **SHAMIL**

Full Stack Engineer · TypeScript, React, Node.js · ~2.5 years across web and mobile

shamilkotta99@gmail.com | shamilkotta.com | github/shamilkotta | linkedin/shamilkotta

Technical Skills

Languages	TypeScript, JavaScript, Rust, SQL, Dart
Frontend	React, Next.js, Vite, Vue.js, Nuxt, React Native, Expo, Flutter
Backend	Node.js, Express, NestJS, GraphQL, Microservices, PostgreSQL, MongoDB, Drizzle, Stripe
Tools	Git, Docker, AWS, Cloudflare Workers, GitHub Actions (CI/CD), Vercel, pnpm, Turborepo, esbuild

Experience

75way Technologies

Jun 2023 - Feb 2026

Software Development Executive · *Node.js, NestJS, Next.js, React Native, Vue.js, Flutter*

- Led end to end development of a **fitness coaching platform**: **Node.js/Express APIs**, the **Next.js web app** and **Stripe** payments for client, workout, nutrition and community management.
- Built the **React Native mobile app**, integrating native health APIs and wearables, plus AI features for image based nutrition analysis and personalised recommendations.
- Built and optimised **NestJS microservices** and **Vue.js apps** for a multi-tenant mortgage platform, with shared sessions and communication across applications.
- Reduced manual processing time by **40-50%** with an automated job scheduler, and improved event driven throughput by resolving resource contention.
- Designed document management, signature and validation workflows across the platform.
- Built booking, matchmaking, player ranking and group payment flows on **Node.js and PostgreSQL** for a sports facility app.
- Led the **Ionic to Flutter migration** (**55-70% faster**) and cut backend load by **40%** through API batching, caching and state work.
- Built Shopify storefront features using Liquid, metafields and the Admin API.

Projects

nlite *React, Vite, TypeScript, RSC* — *npm* · *GitHub*

- **React framework** on Vite with app directory routing, streaming SSR, SSG, **Partial Prerendering**, route handlers and a build time cache.
- Server Components support through my own ESM bindings package. Deploy adapters for **Vercel, Netlify and Cloudflare**. Published on npm (v0.10).
- Wrote a long form post on React's SSR, SSG, hydration and RSC APIs, and the bundler work RSC depends on.

LyzyOS *Next.js, TypeScript, AI agents, realtime sync* — *Live* · *GitHub*

- Agentic workbench where teams and an AI agent share a visual canvas, with realtime sync, persistent state and file storage per workspace.
- Agents can browse the web, run generated code in sandboxes and stream results to every connected client.
- Built on Cloudflare Workers with the Agents SDK and Durable Objects, keeping canvas state in sync over WebSockets

Open Source

- **npmx.dev** (3.6k stars, Nuxt/Vue): 10+ merged PRs, including stale search response handling, an infinite stats loading fix and blog OG images.
- **@shamilkotta/rn-drag-resize**: published a draggable, resizable React Native component on Reanimated (v1.3), extending an existing library.

Education

Bachelor of Science (B.Sc) in Physics · *University of Calicut* — *2019 - 2022*
